

CRITERIA FOR OUTCOMES INDICATORS

Indicators should be:	Definition	Example indicator
Relevant	Indicator measures one of the providers goals. It also applies to the lives of the target clients. In response to a change that provider is likely to influence.	<p>Percentage of agriculture, clients, who have invested in major tools, equipment, structures, or farming inputs within two years of becoming clients.</p> <p><i>For a provider targeting agricultural clients with the goal that they increase their productive assets, this is a relevant Indicator, likely to reflect a change brought on by the provider services.</i></p>
Useable	Management can take action based on the information collected (it is linked to the operational strategy), and the data is likely to be dependable.	<p>Percentage of clients with an increase, decrease, or no change in savings balance.</p> <p><i>Available in institutions. MIS, this information can tell management whether clients are better able to deal with economic shocks, and whether they find savings product useful.</i></p>
Clear	The indicator is unambiguous, clearly defined, and as objective as possible.	<p>Percentage of clients who have made specific changes to their home in the last three years (such as improved roof/walls/floor, expand the house, addition of sanitation or electricity).</p> <p><i>Housing changes are easy for clients and the data collector to understand and observe.</i></p>
Feasible	The indicator is relatively easy to collect: straightforward for clients to answer, non-invasive, and not sensitive.	<p>Number of waged, non-family members working in a client's business. (This is a measure of employment generation).</p> <p><i>Clients can easily understand and count the number of people they employ in their business.</i></p>
Comparable	The indicator can be benchmarked and provides a consistent measure over time.	<p>Percentage of clients with access to sanitary toilet.</p> <p><i>Results can be compared both with the provider's own data over time (change in access to sanitary toilet) and sometimes with national benchmarks.</i></p>
